➤ [China's exports unexpectedly shrink in October, badly missing expectations for growth.](#)

KEY POINTS

- China's exports and imports fell in October in U.S.-dollar terms, according to customs data released Monday.
- That decline missed Reuters expectations for growth in both categories.
- China's exports to the U.S. fell in October for a third-straight month.

➤ [Ukraine looks to technology to help rebuild its economy amid Russia's onslaught.](#)

KEY POINTS

- Ukraine had a notable presence at Web Summit, where it sought support from the global tech community to bolster its fight against Russia.
- Ukrainian officials and entrepreneurs said tech would be key to helping the country rebuild after Russia's invasion.
- Some companies are ramping up hiring in Ukraine in a bet that the country's tech industry will emerge stronger after the war ends.
- Venture capital firms are also raising millions of dollars to back Ukrainian tech entrepreneurs.

➤ [UK on the brink of recession after economy contracts by 0.2% in the third quarter.](#)

KEY POINTS

- The U.K. economy contracted by 0.2% in the third quarter of 2022, signaling what could be the start of a long recession.
- However, the third-quarter contraction was less than the -0.5% expected by analysts.
- The Bank of England last week forecast the country's longest recession since records began.

➤ [Treasury yields climb](#) as investors seek clarity on inflation from Fed speakers, economic data.

KEY POINTS

- Treasury yields rose on Monday as investors looked ahead to a week filled with Federal Reserve speaker remarks and key economic data releases, including October's consumer inflation report.

➤ [Peak inflation in Europe 'is almost within reach,'](#) [European Central Bank member](#) says.

KEY POINTS

- Euro zone headline inflation hit a new historic high of 10.7% last month, according to preliminary data.
- But one ECB member believes that price growth could be about to come down.
- The Governing Council raised rates by 75 basis points both in September and October.
- Markets are expecting an increase of 0.5% for December.

➤ [Fed officials](#) welcome inflation news but still see tighter policy ahead.

KEY POINTS

- Federal Reserve officials welcomed Thursday's news that inflation might have peaked, but cautioned against getting too excited by the data.
- "It's far from a victory," San Francisco Fed President Mary Daly said.
- Dallas Fed President Lorie Logan called the CPI report "a welcome relief" but noted more rate increases probably are coming, albeit at a slower pace.

➤ [IMF chief says rich countries alone can 'never close' the funding gap for climate change.](#)

KEY POINTS

- “So most important here, and in the months to follow, is to work relentlessly to create opportunities for private investments to take place in the developing world,” the managing director of the International Monetary Fund Kristalina Georgieva told CNBC.
- More private investments are needed to help developing countries to meet their climate change targets, she said.
- Vulnerable and developing countries would need between \$160 billion and \$340 billion by the end of the decade to make climate-related changes, and up to \$565 billion by 2050, the United Nations previously said.

➤ [The crisis is over for the British pound, but analysts see further weakness ahead.](#)

KEY POINTS

- After falling to a record low against the dollar of below \$1.04 on Sep. 25 following the disastrous fiscal policy announcements that would eventually lead to the resignation of former Prime Minister Liz Truss, sterling had recovered to around \$1.15 by Wednesday, but remains down 15% year-to-date.
- In a note Monday, Deutsche Bank vice president and FX strategist Shreyas Gopal said the “crisis” chapter on the U.K. can now close, but the pound still has some structural weaknesses.

➤ Coinbase criticizes Singapore’s crypto regulations, urges city-state to embrace retail trading.

KEY POINTS

- Coinbase co-founder and CEO Brian Armstrong said that Singapore aims to be a Web3 hub but disapproves of crypto trading.
- Coinbase recently secured approval from the Monetary Authority of Singapore to offer crypto payment services in the city-state.
- MAS responded that crypto companies are responsible for protecting their customers as many retail investors have lost money to the speculative crypto.

➤ Binance to Sell Rest of FTX Token Holdings as Alameda CEO Defends Firm's Financial Condition.

KEY POINTS

- Binance’s CEO, responding to a CoinDesk scoop about trading firm Alameda Research’s balance sheet, tweeted Sunday that he will sell the remaining FTT tokens held on his books that he took on as part of his exit from Alameda sister company FTX last year.
- Binance CEO Changpeng "CZ" Zhao did not say how much FTT his firm will sell, but that as part of the cryptocurrency exchange’s exit from FTX equity last year, Binance received roughly \$2.1 billion worth in the form of BUSD (Binance's stablecoin) and FTT.

➤ Google Signals Major Crypto Push With Ethereum, Solana Support.

KEY POINTS

- Google Cloud has trumpeted a series of collaborations with popular blockchain networks Ethereum and Solana in recent weeks, accelerating the tech giant’s support of Web3.

➤ Nomura Unit Preparing to Trade Crypto, Boost Staff by 45%.

KEY POINTS

- The crypto unit of Nomura — one of Japan’s largest banks — aims to grow its team to 55 over the next three months by capitalizing on talent in the world’s top financial cities.

➤ Cryptocurrencies slide as worries about FTX fester in latest crypto liquidity scare.

KEY POINTS

- The cryptocurrency market fell on Tuesday amid rumors of insolvency at crypto exchange FTX and worries over what it says about the financial conditions of its sister company Alameda Research.

➤ Crypto billionaire Sam Bankman-Fried blames himself for FTX’s collapse, admits he ‘f---ed up’.

KEY POINTS

- FTX’s Sam Bankman-Fried tweeted Thursday morning that he is “sorry,” admitting that he “f---ed up” and “should have done better.”
- The post comes as the one-time hero of the crypto sector is begging for billions of dollars to stave off bankruptcy.
- “I also should have been communicating more very recently,” wrote Bankman-Fried. “Transparently--my hands were tied during the duration of the possible Binance deal; I wasn’t particularly allowed to say much publicly. But of course, it’s on me that we ended up there in the first place.”

Your CRYPTO Weekend Wire Glossary

A

- ❖ **Address (Crypto Address):** An address is comparable to a bank account number. It is a unique collection of numbers and letters. This identification code is required to carry out a blockchain transaction and is unique for each owner. (ie: 1GyWgXtkVG5gsm9Ym1rkHoJHAftmPnTHQj)
- ❖ **Airdrop:** An airdrop is a way to distribute coins. End users can generally get coins for free or in exchange for a small task, such as subscribing to a newsletter, sending a tweet or inviting other people via a personal affiliate link.
- ❖ **Algorithm:** The 'algorithm' is a way to solve a task using data processing and calculations. There are different types of algorithms in use by blockchains.
- ❖ **Altcoin:** An altcoin is any cryptocurrency or token created after the Bitcoin was developed.
- ❖ **Anti-Money Laundering (AML):** AML is the abbreviation for 'anti-money laundering'. AML stands for policy and legislation on money laundering. This prevents illegally acquired funds from being converted into a legal variant. Within the crypto world, it is no longer unusual for AML techniques to be used by exchanges and wallets. This term is often used as AML/KYC, where KYC stands for 'Know your customer'.
- ❖ **APY:** APY is short for 'annual percentage yield', which is the total return rate that is earned on an interest-bearing asset or savings account. The compounding interest should be considered when the APY percentage is projected. An APY of 5% will turn \$100 into \$105 after exactly one year.
- ❖ **ATH:** ATH is the abbreviation of 'All-Time High' and means the highest price ever paid for a particular coin. ATH is also often used to indicate that someone's total portfolio has reached the highest value ever.
- ❖ **ATL:** ATL stands for 'all-time-low' and is the opposite of ATH, or 'all-time-high'. ATL is used to indicate that the price of a coin or the entire wallet of a person is at the lowest level ever in terms of value.

B

- ❖ **Bitcoin (BTC):** Bitcoin is the very first, best known and currently the most valuable digital coin.
- ❖ **Bitcoin (unit of Currency):** The bitcoin is the very first cryptocurrency invented in 2008 by an anonymous developer named Satoshi Nakamoto. It can be divided up to 8 digits after the comma. The smallest one is called a satoshi (0.00000001 BTC).
- ❖ **Blockchain:** The blockchain is a technique that makes it possible to safely store data in a decentralized way. This data can be money, but it could be other data as well.

Your CRYPTO Weekend Wire Glossary

- ❖ **Bot:** A 'bot' is an autonomous program on a network, such as the Internet, that can interact with systems or users. It is often designed to automate certain manual tasks. Bots are often used in Telegram chat groups to prevent spam.

C

- ❖ **CBDC:** CBDC stands for 'Central bank digital currency' and is the fully digital form of fiat money. Unlike at Bitcoin, this type of currency would be created by a centralized authority like a central bank or a monetary authority. It might or might not have a distributed ledger. Each central bank in the world can have a custom implementation. Currently, it is still in test phase or just a concept on paper.
- ❖ **Centralized:** Centralized means that one organization has control. For example, governments and companies are centralized. The opposite of centralized is decentralized, such as the Internet and the blockchain.
- ❖ **Coin:** A Coin is the umbrella term for cryptocurrencies and tokens.
- ❖ **Cold Storage:** Cold storage refers to storing cryptocurrency on a place where the private key cannot be accessed via the internet. This can be done on a hardware wallet, paper wallet or software wallet in an offline environment.
- ❖ **Cold Wallet:** A cold wallet is a wallet for storing cryptocurrency where the private key is not exposed to the Internet.
- ❖ **Cryptocurrency:** A cryptocurrency, also known as 'crypto', is a type of currency that is transferred via a blockchain. It uses strong cryptography to secure the transactions, that usually have value. While traditional fiat currencies are subject to counterfeiting, this is not possible in a cryptocurrency. Bitcoin is still the most valuable cryptocurrency.

D

- ❖ **DAO:** DAO is an abbreviation of 'Decentralized Autonomous Organization'. This is an organization that runs automatically on itself without any human interventions. The work is automatically executed through Smart contracts.
- ❖ **DeFi:** DeFi is the abbreviation of 'Decentralized Finance'. It can be defined as a new financial ecosystem consisting of various financial tools, apps and services utilizing blockchain technology. It's an umbrella term for all these projects combined and is growing daily. Examples of DeFi functionality are banking services in the form of stablecoins, decentralized exchanges, derivatives, prediction markets, or lending and borrowing systems. The last one can be either peer-to-peer or with a pool. It is a combination of replicating products and services in the traditional finance industry as well as innovative new ones only possible with blockchain technology.

Your CRYPTO Weekend Wire Glossary

❖ **DEX:** A DEX is short for Decentralized Exchange. This is an exchange where people can trade cryptocurrencies and tokens without the need of a middleman. It is usually run by code in a 'smart contract'. The transactions are generally written to the blockchain, which makes a DEX by default slower than a centralized exchange that uses fast databases. The main benefit of a DEX is that nobody, but yourself, holds the private key to the funds. Even though a DEX will not have a middleman regarding the trades, the exchange and the website are centrally managed. Therefore, it's not 100% decentralized in fact. The level of decentralization differs per DEX. Use the filters in this list with exchanges to find each DEX.

E

- ❖ **ERC-20:** ERC20 coins are all tokens on the Ethereum blockchain. These coins are also supported by most Ethereum wallets.
- ❖ **ETF:** ETF is an abbreviation for 'Exchange-Traded-Fund' or a listed fund on a stock exchange. This is a tradable product (security) that follows the price of an underlying asset. Examples are an equity index, a basket of certain securities, bonds and commodities. There are several applications for a Bitcoin ETF, but none of these has yet been approved by the SEC in the United States of America.
- ❖ **Ethereum:** Ethereum (ETH) consists of one blockchain where both its own transactions (Ether) and those of numerous other coins (tokens) are recorded. Ethereum distinctive feature is the so-called "smart contract". The programming language of Ethereum is written in such a way that programmers can write their own programs based on the Ethereum blockchain.

F

- ❖ **Fiat Currency:** Fiat currency or also simply called fiat is money issued by a government or organizations that can issue it, like banks for example. It doesn't have any value by itself and is for decades not backed by gold anymore either. It instead remains value based on the trust of the people. Once the trust goes away it will decrease in value and could eventually cause hyperinflation.
- ❖ **Fully Diluted:** Fully Diluted in crypto refers to fully diluted market cap. This is the market cap of a coin based on its total supply instead of the circulating supply. This is an important metric for investors to compare coins and help with the decision if it's overvalued or undervalued.

H

- ❖ **HODL:** HODL is the wrong spelling of 'hold'. This spelling mistake was once made by someone accidentally or intentionally on a forum. Since then, this term has been used to indicate that you keep or should be holding your position.

Your CRYPTO Weekend Wire Glossary

I

- ❖ **ICO:** An 'initial coin offering' (ICO) can be compared a bit with an IPO. Investors get an opportunity to invest in a certain coin for the first time. The difference with the stock market however is that a company must meet all kinds of requirements before the IPO can take place. The market of ICO's is much less regulated. Therefore, it happens more often that an ICO is fraudulent.
- ❖ **Interoperability:** The term interoperability in crypto refers to blockchain interoperability. In short, this means the ability to share information between different blockchains. Since the launch of Bitcoin, a lot of new blockchains have emerged of which the most well known Ethereum. All these new blockchains are in a way competing to get adoption by developers and users and results in a lot of silos. Since each blockchain usually has its own speciality, it would make sense for developers to utilize more than one blockchain. For this to work there is a need for the interoperability and several projects are working on this.

K

- ❖ **Key Pairs:** A key pair is the combination of a public and private key together. During the process of creating a wallet, a pair of keys is generated. The private key is the most important one and should be backed up safely and not shared with anyone.
- ❖ **KYC:** KYC is an abbreviation for 'Know Your Customer' and was created to combat money laundering via cryptocurrencies. At almost every ICO it is mandatory to prove that you are who you say you are. This is also regularly requested at crypto exchanges.

M

- ❖ **Masternode:** A masternode is a server, ran from home or in a data center, that has an essential role in a decentralized network. It usually performs specific tasks, like storing files or data and keeping it accessible in the network. It could also function to validate the transaction or for consensus purposes like voting on proposals. The technical (memory, CPU, etc.) and financial criteria (number of coins needed) are different for each coin. If the masternode you set up does not perform well it's possible to lose your coins if those are meant as collateral. The rewards could also just stop and then you can just start over again. A masternode usually gives a high reward that's paid out in the coin itself.
- ❖ **Maximum Supply:** This is the maximum number of coins that will exist for a token or cryptocurrency. If there is a max supply defined, no more coins can be created. 'Burned' coins are part of this supply, so therefore it is always larger than or equal to the total supply.
For Bitcoin, the maximum is set to 21 million.
- ❖ **Mining:** Mining is also known as 'Cryptocurrency mining' or 'Cryptomining'. It is a process where blocks are added to a blockchain by solving a mathematical puzzle. The block can also contain transactions on that blockchain and will then become verified and immutable. Depending on the blockchain, mining can be done with a CPU, GPU, specialized hardware or a combination of all.

Your CRYPTO Weekend Wire Glossary

N

- ❖ **NFT:** *NFT is the abbreviation of non-fungible token. This is a type of token representing a unique asset. These can be either digital or represent real-world assets. Examples are a sword in a game or ownership of a piece of land. NFT's are generally scarce, unique and indivisible. The Ethereum blockchain makes it easy to create NFT's with it's ERC-721 and ERC-1155 standards.*

O

- ❖ **ODN:** *ODN is the abbreviation of 'OriginTrail Decentralized Network'. This is an open-source and permissionless network that relies on an off-chain technology stack consisting of several inter-related layers. It is a decentralized network of data providers, data creators, data holders, and data viewers. The glue between all entities is the ERC-20 based Trace Token (TRAC). This is used as a collateral stake to keep data holders honest and for payments to compensate the data holders for providing their resources.*

P

- ❖ **Paper Wallet:** *A paper wallet is an alternative to a hardware or software wallet. It is a piece of paper or a PDF containing the information to access the cryptocurrency in that wallet. It normally consists of a 'public key' and a 'private key'.*
- ❖ **Permissioned Blockchain/ledger:** *Anyone can mine Bitcoins because it is a public blockchain. This is not the case with a permissioned blockchain. There is a layer above it that determines which entity can write transactions in a block. The XRP coin from the company Ripple Labs is an example of such a blockchain and has CGI, MIT and Microsoft as approved entities for example. These are called "transaction validators".*
- ❖ **PoA (Proof of Authority):** *PoA stands for 'Proof of Authority'. This is a validation method to process transactions and blocks in a blockchain only by approved accounts. These are known as 'validators' and run specific software to store the transactions in blocks. Since the identity is linked to the system, it can contribute to more trust.*
- ❖ **Private Key:** *A private key in the crypto space can be defined as the combination of letters and numbers that corresponds to a specific public key. The private key can be used to gain access to the assets on that public key, also known as the wallet address. Once you share your private key with somebody, store it on your computer in plain text or type it in a website or app, you risk losing all your funds stored on its a corresponding public address.*
- ❖ **Public Key:** *A public key in the crypto space can be defined as a combination of letters and numbers and forms the address to which the cryptocurrencies or tokens can be sent to. Everybody who knows the public key of somebody can see the assets stored on that address. Only the owner of the corresponding private key can send those assets out.*

Your CRYPTO Weekend Wire Glossary

Q

- ❖ **QR Code:** A QR code is a type of barcode in the form of a square. The letters QR stand for 'Quick Response'. The code contains many dots, a few small squares and sometimes a small logo in the middle. This is different from most other barcode types, which are rectangular with lines. A QR code can therefore contain much more information. Within the crypto world, it is often used to make a 'wallet' address scannable. This speeds up the process of transferring crypto and prevents errors.

S

- ❖ **Satoshi Nakamoto:** Satoshi Nakamoto is the alias of the creator of Bitcoin, who wants to remain anonymous. Nobody knows who it is. It could be a person, a group, a company or even a government. It is quite likely that it is a person because there are people who have communicated with him or her via e-mail.
- ❖ **SEC:** SEC is the abbreviation of 'Securities and Exchange Commission'. This is an independent government organization of the United States of America. The SEC holds the primary responsibility regarding the financial markets. They enforce the federal securities laws, propose new rules and regulate the US financial markets.
- ❖ **Stablecoin:** Stablecoins are tokens or cryptocurrencies attempting to have a minimized volatility of its price. It usually tries to keep a stable price of a related asset like USD for example. It can be backed by the related asset or replicated using smart contracts. Stablecoins are usually pegged to fiat money, but it's also possible to be pegged to precious metals like gold or silver, or even other assets. It enables an easily accessible way to store crypto wealth, temporarily, in a more stable asset during market volatility instead of using the traditional financial ecosystem. Fiat withdrawals can take a few days and could be costly as well.

T

- ❖ **Tether:** The Tether is often abbreviated as USDT on exchanges. This is a non-government regulated 'stablecoin' with a value of around 1 US dollar. The company behind this coin claims that every Tether in circulation is covered with real dollars on their bank account.
- ❖ **Total Supply:** The 'total supply' indicates the number of coins already in circulation, supplemented with the coins that are not tradable yet. So, it only applies to coins already in existence. This is different from the 'max supply', in which future coins are included. The total supply is greater than or equal to the 'circulating' supply. It can consist of tradable and non-tradable coins, such as reserved or not yet released coins for the team or investors.
- ❖ **Transaction Fee:** The 'transaction fee' is the amount that must be paid to execute transactions on the Blockchain. This fee is usually paid to the 'Miners', but sometimes they are burned. There are also several cryptocurrencies, where you don't have to pay a fee.

Your CRYPTO Weekend Wire Glossary

W

- ❖ **Wallet:** A 'wallet' is a place to store cryptocurrencies encrypted. There are several variants, such as a paper wallet, hardware wallet or software wallet. Each coin has one or more supported wallets.
- ❖ **Whale:** A 'whale' is someone with a very large position in a coin.
- ❖ **Whitepaper:** A 'whitepaper' is a document that is almost always written for the launch of a new coin through an ICO. All aspects of a coin should be explained here: how it is used, for what and sometimes also the price expectation. After the ICO new versions can be released if the situation changes.

Y

- ❖ **Yield Farming:** Yield farming is the process of generating the most returns possible on your crypto assets by putting them to work. Within the crypto space, DeFi has taken on a big role and services inside this space are making yield farming possible. There are nowadays ways to move your crypto assets to pools to gain interest on those assets giving it an annual percentage yield (APY). Just buying crypto-assets and holding them in your wallet, won't generate any yield, but lending them out with DeFi services like, Compound, for example, does make this possible. A term closely related to yield farming is liquidity mining.
