

### **Market Corner**

Asian stocks rose as Japan's Topix benchmark headed for its highest close in more than three decades, while worsethan-estimated economic data from China dragged on its mainland-traded equities.

The MSCI Asia Pacific Index gained as much as 0.6%, with technology names TSMC, Samsung and Tencent among the top contributors. Taiwan and Philippine markets were among the best performers. Onshore Chinese stocks fell amid weak economic data that suggest the recovery in the world's second-largest economy is losing momentum.

Japan's benchmark Topix has climbed 12% so far this year, beating the MSCI Asia Index's 4.5% gain and a 7.7% advance in the S&P 500. A weakening yen and solid earnings are among factors that have boosted Japanese stocks, with Goldman Sachs among strategists seeing more gains to come.

### US stocks rose as investors assessed the progress of debt-ceiling talks in Washington and the Federal Reserve's policy path.

The S&P 500 Index closer 0.3% higher and the Nasdaq 100 Index rose 0.6%. The yield on a 10-year Treasury note rose to 3.50%. The VIX Index edged higher to 17.12.

The debt ceiling remains a big focus for investors this week, with strategists warning about market and economic turmoil if politicians don't agree to raise the government's \$31.4 trillion borrowing limit. President Joe Biden, House Speaker Kevin McCarthy and other congressional leaders are planning to hold further talks on Tuesday.

Earlier this morning, Federal Reserve Bank of Atlanta President Raphael Bostic pushed back against bets in financial markets that the central bank will cut interest rates this year and cautioned against taking further hikes off the table if inflation doesn't cool.

## **Crypto Corner**

Last year's run on crypto platforms like lender Celsius Network were "spearheaded by customers with large holdings, some of which were sophisticated institutional customers," according to research from the Federal Reserve Bank of Chicago.

In the case of Celsius, 35% of all withdrawals in June — before the lender froze withdrawals and eventually filed for bankruptcy — were by owners of accounts of more than \$1 million, according to Chicago Fed estimates. Owners of accounts with more than \$500,000 in investments were the fastest to withdraw and withdrew proportionately more of their funding, the research said.

The Chicago Fed used bankruptcy filings to characterize outflows of customer funds from lenders Celsius, BlockFi and Genesis Global Capital LLC, in addition to FTX and broker Voyager Digital, all of which went bankrupt last year, leaving hundreds of thousands of retail investors in a lurch. It also said the platforms' run risk and planning for a potential rush of withdrawals was inadequate in the lead-up to the collapse of FTX and the Terra-Luna ecosystem.

Customers withdrew a quarter of their investments held by FTX within just one day, the Chicago Fed found. Voyager lost nearly 39% of its holdings in the June 12-July 2 run, after losing nearly 14% to outflows in May.

"These episodes together formed a classic financial crisis in a novel setting that has raised urgent policy concerns," wrote the study's authors Radhika Patel, a Chicago Fed research assistant, and Jonathan Rose, historian of the Federal Reserve System.

Actual bank runs — such as the recent collapse of Silicon Valley Bank — can happen even faster than crypto bank runs, Rose said in an interview. That's largely a function of the type of depositors who participate in these platforms and technology and processes being used to make withdrawals.

"The runs on those banks were extraordinarily large and fast — the largest and fastest we've ever seen," Rose said.

## **Commodity Corner**

**Gold was steady** — after edging higher Monday — before a meeting to try and resolve the US debt-ceiling stalemate. Bullion traded near \$2,015 an ounce ahead of the meeting between President Joe Biden and House Speaker Kevin McCarthy on Tuesday afternoon in Washington. The precious metal has been benefiting from mounting anxiety over a

potentially disastrous default, with more than half of financial professionals surveyed by Bloomberg saying it's the best hedge for such a scenario.

Federal Reserve Bank of Atlanta President Raphael Bostic said he would vote to pause the US tightening cycle if a meeting took place now. The interest-rate trajectory is a major driver for gold, with higher borrowing costs typically negative for the non-interest-bearing metal

**Spot gold** was steady at \$2,016.18 an ounce as of 12:51 p.m. in Singapore after rising 0.3% on Monday. The Bloomberg Dollar Spot Index was little changed after falling 0.3% in the previous session. Silver declined, while platinum and palladium edged higher

Oil rose as the US started seeking crude to refill its strategic reserves, but concerns are mounting over China's economic recovery.

West Texas Intermediate edged toward \$72 a barrel after closing 1.5% higher on Monday. The US solicited bids for as much as 3 million barrels of sour crude for its Strategic Petroleum Reserve, with deliveries planned for August and awards to be announced in June, the Energy Department said.

China's consumer spending and industrial activity grew at a slower pace than expected in April, adding to signs that the rebound post-Covid Zero is losing momentum. Crude processing held near a record, however.

The SPR purchase, while relatively small, indicates the US seems serious about refilling the reserve after doubts in recent months, said Warren Patterson, head of commodities strategy for ING Groep NV. China's industrial production was disappointing, but the oil numbers were "quite constructive".

Oil is 11% lower this year as China's lackluster recovery and a potential US recession weigh on the demand outlook. Ongoing talks on the US debt limit are also unnerving markets, with Treasury Secretary Janet Yellen saying the nation is already paying a price for not yet increasing the ceiling.

# **FX Corner**

**EUR/USD** attracted some buying near the 1.0845 region, or the lowest level since April 10 touched on Monday and stalled its recent pullback from the vicinity of the 1.1100 mark, or over a one-year high set earlier this month.

**GBP/USD** declines below 1.2500 in the European morning on Tuesday. The data from the UK showed that the ILO Unemployment Rate edged higher to 3.9% in March. In the same period, wage inflation including bonus was 5.8%, matching the previous reading.

**USD/JPY** has slipped below the crucial support of 136.00 in the Tokyo session. The asset is expected to remain on tenterhooks as investors are waiting for the US borrowing cap negotiations between the White House and congressional Republicans.

**AUD/USD** is trading on the back foot below 0.6700, having come under renewed selling pressure after Chinese activity data disappointed the market. The Minutes of the RBA's May meeting revealed that the board considered pausing or hiking 25 basis points. Focus now shifts to the US data.
